

The oven is not insulated. External steel surface can reach a temperature of over 200°C.
Use Superwool® Plus all around the external structure (6/8 cm) and the top (6/8 cm). Once insulated, you can finish the external masonry wall.
It is essential to maintain a clearance space between the oven and the ceiling to access the flue connection.

Wrap the oven with the insulating blanket. Put it all around 3 times and also on the top of the oven.

Once insulated, build the external masonry wall and finish the oven giving the aesthetic touch
*Oven mod. MEC 80 must be insulated and covered with fire resistant materials.
Failure to follow the installation instructions could cause damages as fires. .*
